About Me

During my professional career, I discovered my passion for programming, and since then, my goal has been to prepare myself to participate in real projects as a backend developer.

I have the ability to adapt to different projects, whether they are virtual or in-person. Furthermore, I love learning new things.

On the other hand, I have always liked outdoor sports and video games, especially Modern Tetris.

Work Experience

• Freelancer Full Stack

Upwork, November 2023-Actual 2023-Actual

- Update and domain migration of a foundation's website.
- Creation of a 100% responsive page to calculate the return on investment (ROI), with different sliders and user input.
- Minor changes to the form of a PHP website.

• Diseñador Web

Cielum Health, March 2022 - September 2022

- Creation of mockups for the company's product portfolio and subsequent development.
- Creation of mockups for a medical website.
- Development of infographics on health topics.
- Creation of explanatory videos for events, contests, and social media.
- Design of forms and their subsequent development.

ACHIEVEMENTS: Based on my knowledge of CSS, the workflow was improved by modifying the information to be exported from Illustrator for the subsequent development of web pages. The development team found it useful, and the proposed method became the standard.

Academic Data

2023 Udemy
